

RunRoute - User Flows & Wireframes

1. Overview

This document defines the complete user experience flow for RunRoute, including detailed user journeys, wireframes for key screens, and interaction patterns. The flows are designed to provide an intuitive and frictionless experience for route planning, run tracking, and social engagement.

2. User Journey Map

2.1 New User Journey

2.2 Returning User Journey

3. Core User Flows

3.1 User Onboarding & Registration Flow

4. Navigation Structure

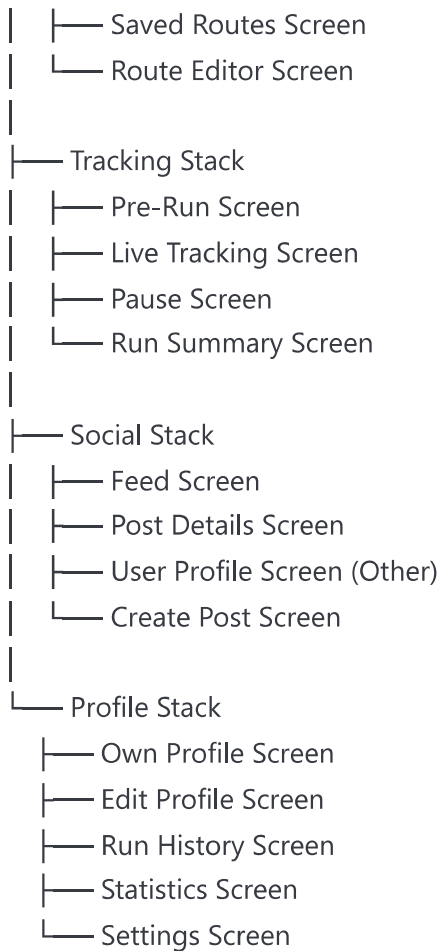

4.1 App Information Architecture

4.2 Screen Hierarchy & Navigation Patterns

5. Interaction Patterns & UI Behaviors

5.1 Map Interactions

- **Single Tap:** Set start/end point or add waypoint
- **Long Press:** Open context menu or add custom waypoint
- **Drag:** Move existing waypoints to modify route
- **Pinch to Zoom:** Standard map zoom behavior
- **Pan:** Navigate around the map
- **Double Tap:** Zoom in on location

5.2 Route Modification

- **Drag Waypoint:** Real-time route recalculation
- **Add Waypoint:** Tap on route line to insert new point
- **Remove Waypoint:** Long press waypoint → delete option
- **Route Alternatives:** Swipe between generated options
- **Distance Adjustment:** Slider with haptic feedback

5.3 Live Tracking Controls

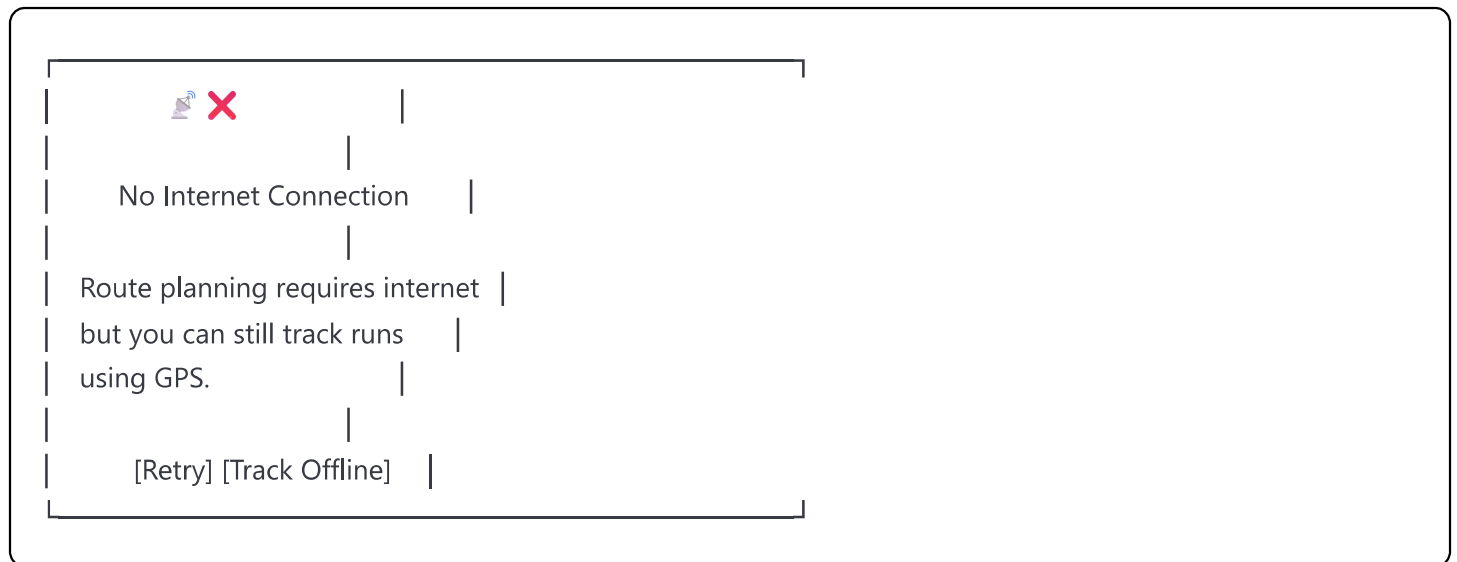

- **Pause/Resume:** Large, accessible buttons
- **Emergency Stop:** Long press stop button
- **Lock Screen:** Prevent accidental taps during run
- **Voice Updates:** Audio cues for distance/pace milestones
- **Background Mode:** Minimize battery drain

5.4 Social Interactions

- **Double Tap to Like:** Instagram-style heart animation
- **Swipe Actions:** Swipe left for quick like, right for share
- **Pull to Refresh:** Update feed content
- **Infinite Scroll:** Load more posts automatically
- **Haptic Feedback:** Confirm actions with subtle vibrations

6. Error States & Edge Cases

6.1 Network Connectivity Issues

6.2 GPS/Location Issues

to track your runs and plan
routes.

[Open Settings] [Skip]

6.3 Route Generation Failures

Couldn't Generate Route

Try adjusting your distance or
choosing different start/end
points.

[Try Again] [Modify Parameters]

7. Accessibility Considerations

7.1 Screen Reader Support

- All buttons and interactive elements have descriptive labels
- Map annotations include spoken descriptions
- Run metrics announced during live tracking
- Navigation structure clear for voice navigation

7.2 Visual Accessibility

- High contrast mode support
- Scalable text (supports Dynamic Type on iOS)
- Color-blind friendly color schemes
- Clear visual hierarchy and spacing

7.3 Motor Accessibility

- Large touch targets (minimum 44pt)
- Voice commands for run control

- Simplified gestures option
- Alternative input methods

8. Performance Considerations

8.1 Map Rendering

- Progressive loading of map tiles
- Efficient polyline rendering
- Clustering for multiple routes/runs
- Memory management for long sessions

8.2 Real-time Updates

- Debounced GPS updates
- Efficient WebSocket connection management
- Battery optimization during tracking
- Background task limitations handling

8.3 Social Feed

- Image lazy loading
- Virtual scrolling for large feeds
- Optimistic UI updates
- Intelligent caching strategies

9. Onboarding & Tutorial Flows

9.1 Progressive Disclosure

1. **Welcome Screen:** Core value proposition
2. **Route Demo:** Interactive route planning tutorial
3. **Tracking Demo:** Simulated GPS tracking experience
4. **Social Demo:** Example social feed interaction
5. **Setup:** Minimal required information

9.2 Feature Discovery

- **Tooltips:** First-time feature highlights
- **Empty States:** Guidance for new users

- **Progressive Hints:** Contextual tips during use
- **Help System:** In-app help and tutorials

This comprehensive user flow and wireframe specification provides a complete blueprint for developing RunRoute's user experience, ensuring intuitive navigation and engaging interactions throughout the app.
